

VENKATA NARESH

DevOps Engineer | AWS | CI/CD | Kubernetes | Terraform | Docker | Cloud Solutions

+91-9398628990 | venkatanaresh.dev@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of experience designing and managing CI/CD pipelines, cloud infrastructure, and Kubernetes-based deployments across enterprise environments. Proven track record in automating infrastructure using Terraform and Ansible, implementing workflows with Jenkins, and delivering production-grade solutions for BFSI and large-scale enterprise clients. Experienced with AWS, Azure, and GCP environments, with a strong focus on system stability, cost optimisation, and security compliance.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, EBS, VPC, IAM, RDS, S3, Lambda, EKS, ELB/ALB, Auto Scaling, CloudFront, Route 53), Azure, GCP

CI/CD & Automation: Jenkins, Maven, SonarQube

Containers & Orchestration: Docker, Kubernetes, Helm, EKS

IaC & Config Management: Terraform, Ansible

Monitoring & Logging: Prometheus, Grafana, CloudWatch, CloudTrail

Version Control & Tools: Git, GitHub, JIRA

OS & Scripting: Linux, Windows, Shell Scripting

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | Capgemini

Feb 2024 – Present

- Designed and maintained CI/CD pipelines using Jenkins, significantly reducing manual deployment effort and improving release efficiency across Dev, UAT, and production environments.
- Enabling zero-downtime Kubernetes rollouts and improving deployment consistency. Provisioned and managed cloud infrastructure using modular Terraform scripts, reducing infrastructure setup time.
- Provisioned and managed cloud infrastructure using modular Terraform scripts, reducing environment provisioning time from days to a few hours.
- Managed EKS clusters supporting microservices, handling deployments, auto-scaling, rollbacks, and production incident troubleshooting with SLA adherence.
- Implemented Kubernetes resource requests and limits across microservice deployments, preventing resource overconsumption and improving cluster bin-packing efficiency.
- Containerised 8+ legacy and new applications using Docker, migrating them into Kubernetes with improved resource utilisation and fault tolerance.
- Set up end-to-end observability using Prometheus and Grafana, improving incident visibility and enabling faster issue detection.

- Implemented secure secrets management practices using HashiCorp Vault and Kubernetes Secrets, ensuring secure handling of sensitive credentials and eliminating hardcoded secrets from CI/CD pipelines and deployment manifests.
- Configured CloudWatch alarms and log metric filters for EKS workloads, enabling proactive monitoring and faster response to production issues.

DevOps Engineer | Infosys

Jan 2022 – Feb 2024

- Designed and maintained end-to-end CI/CD pipelines using Jenkins, Git, and Maven, supporting deployments across AWS and GCP environments and reducing release cycle time by 35%.
- Automated provisioning of multi-environment infrastructure (Dev/QA/Prod) using Terraform and Ansible, cutting manual configuration effort by 70%.
- Deployed and managed 12+ containerised microservices on Kubernetes using Helm charts, improving deployment consistency and rollback efficiency across environments.
- Configured AWS and GCP networking, including VPCs, subnets, security groups, and load balancers, supporting high-availability architecture for enterprise workloads.
- Built Shell scripting-based automation for routine ops tasks, including log rotation, health checks, and alerting, saving approximately 10 engineering hours per week.
- Worked with Azure environments for cross-cloud integration tasks, supporting multi-cloud deployment requirements as part of Bayer's cloud strategy.
- Helped enforce secrets management best practices using Vault and Kubernetes Secrets, eliminating plaintext credentials from pipeline configs and Helm chart values across 12+ services.
- Assisted in integrating Grafana alerting with Slack, enabling on-call engineers to respond to threshold breaches within minutes and reducing alert noise by consolidating redundant notifications.
- Implemented IAM least-privilege roles and policies across AWS and GCP, ensuring service accounts and pipeline identities had only the permissions required — supporting Bayer's enterprise compliance standards.
- Integrated SonarQube static analysis and dependency vulnerability scans into Jenkins pipelines, enforcing quality gates and preventing known CVEs from reaching production.
- Assisted in managing Kubernetes RBAC policies, restricting namespace-level access for development, QA, and production environments and reducing the risk of accidental cross-environment changes.
- Collaborated with development, QA, and operations teams to troubleshoot deployment issues, optimise CI/CD workflows, and ensure smooth production releases with minimal downtime.

System Engineer | MAXTON TECHNOLOGY

Jan 2021 – Feb 2022

EDUCATION

Bachelor of Technology (B.Tech)

Jawaharlal Nehru Technological University (JNTU)
